Received 12 May 2009

The fixed value of the noise intensity D ($= 0.3$) must be corrected as $D = 1.5$ by multiplying the value of the capacitance C ($= 5$). The same correction for the value of D must also be done in our recent paper [W. Lim and S.-Y. Kim, *J. Korean Phys. Soc.* **52**, 1913 (2008)]. All numerical results are valid for this corrected value of D .
